

# BOC Heating Necks

*Providing equipment solutions for our customers*

For maximum performance, use the recommended pressures and adequate gas supply. Manifolding of cylinders is essential for safe and efficient operation of large-size heating nozzles.

The 200mm long BOC acetylene heating neck is designed to be used with the BOC Combi torch, heavy-duty acetylene mixer and acetylene heating nozzles.

**Conformation:**

- Used in BOC ProMaster outfit
- Gas: acetylene

**Compatible with:**

- Combi shank
- Combi mixer
- Combi acetylene heating nozzles

The 700mm long BOC propane heating neck is designed to be used with the BOC Combi torch, propane mixer and propane heating nozzles.

**Conformation:**

- Gas: propane

**Compatible with:**

- Combi shank
- Combi mixer
- Combi propane heating nozzles

The light-duty BOC neck and barrel unit is designed to be used with the BOC Combi-Lite torch for light-duty heating and brazing applications. The solid copper construction allows for maximum heat dissipation.

**Conformation:**

- Used in BOC WeldingPak outfit
- Gas: acetylene

**Compatible with:**

- Combi-Lite shank
- Combi-Lite mixer
